

MODEL INITIATIVE OF AFRICA
WORLD ENGINEERING DAY

Our objectives for celebrating world engineering day in Secondary & High schools across Cameroon.

Engineering is the use of scientific principles to design and build machines, bridges, roads, vehicles, to help do work easily and to find creative and practical solutions to problems. With these inventions of engineers, **engineering day** was created to appreciate engineers for their great impact in the world.

Our objectives for celebrating world engineering day in schools include:

- To enable students appreciate the contributions of engineers all over the world.
- The day offers an opportunity to highlight engineers and improve the students understanding of how engineering and technology are central to modern life and for sustainable development.
- To create awareness to students on what engineering is about and the benefits of being an engineer.
- The day helps mold up the students and gives them the hunger for creativity and innovations as they see engineers display their projects and inventions.
- The day provides a platform where students who aspire to be engineers can feel free to ask engineering related questions which will aid them choose a field suitable for them.
- To inspire more students of the female gender to opt for engineering careers

AGENDA FOR EVENT

- Presentation of the organization by the Regional Supervisor, OTANG THIERRY OTANG
- Presentation on Engineering and the world (How the world would look like without engineering and how Engineering has transformed the world to what it is nowadays)
- Presentation on Engineering Careers
- Presentation on Involvement of women in technology
- Showcase of a engineering projects; a street light prototype and a room temperature monitoring system
- Questions and answers session
